

Why Patients Love Us

Our Patient Centered Care approach and customized care plans assure that we never forget that patients are people first. By appreciating uniqueness and caring for the whole person, we can address needs that don't show up on paper.

With care management support that begins at intake and access to the widest array of resources, we put our clients in the position to make choices based solely on maximizing health, comfort and mobility.

Patients under our care are in **DEPENDABLE** hands.

Why Case Managers Depend On Us

Our goal is to never say "NO." Referring physicians, case managers, discharge planners and social workers depend on our fast response, reliability and communication of patient status and outcomes.

We do what it takes to get care started when it is needed, including placing with our competitors any case we can not handle.

We are sensitive to your care environment, including strictly limiting our liaisons to the spaces you designate.

The "Care Repair" Program

Call us with your most difficult cases - even if previous home care plans have failed. Our specialized interventions can increase compliance and improve outcomes!

The Pillars of Dependable Care

Meeting Challenges Together

Founded by a nurse and operated by a team of trained and licensed health care professionals, we specialize in providing services that allow seniors and disabled individuals to stay in the comfort of their own homes. Whether it's follow-up care after a hospitalization, short-term care following an injury or care to help manage a chronic disease, our team of skilled professionals is there to help.

From skilled nurses and therapists to aides, we do extensive searches to find the most qualified and **DEPENDABLE** staff.

We are fully committed to providing superb service to you in accordance with your physician's orders. Our nurses and therapists develop a plan of care tailored just for you and teaching is provided to foster your independence and self-care.

Our "Patient First" attitude guides our service to our patients. We treat all our patients with dignity and respect.

Quality Care Without A Price Tag

Care decisions should be driven by needs, not dollars. That is why we are certified by the government programs that assure that care needs are met.

The Medicaid Waiver Program provides personal and respite care to those who qualify financially - allowing you to remain at home instead of letting care needs force you prematurely into a nursing home.

We also accept private insurance, long term care insurance and workers compensation. All it takes is a call to get us started on arranging the care you need at the lowest possible cost.

It's not just about cost. It's also about quality. That is why we participate in a variety of programs that provide both patient and caregiver with all the latest resources.

Person Centered Care

Working under the direction of a psychiatric nurse, we offer **DEPENDABLE** Person Centered Care to provide:

- Up-front matching of care to the person
- Our unique ability to make even the most difficult patients more compliant with care
- A proactive behavioral health assessment and intervention program that meets the standards of sub-acute facilities for engagement and support, significantly reducing the risks of isolation that come with care at home
- A commitment to communication that makes transitions easier and patients happier
- The kind of patient support and satisfaction that creates stability and reduces return visits to the hospital
